Adobe Acrobat Command Line

But you can close Acrobat from the command line, though it is a bit convoluted Is there a way to use acrobat with the command line? I use Acrobat with the windows command line to display PDF files by: C: 'Program files' Adobe 'Acrobat 11.. You cannot close the last open Acrobat window through the command line From ancient history of programming scripts for Acrobat, I believe that there is no way to do this in an Acrobat script, either.. PDF is%1%1 allows any filename to be entered, i e , pdfread filename pdf Nov 02, 2017 Found the executable path for Adobe Acrobat XI and am trying to uninstall from command prompt and make a batch file to script it.. Can I get some help with this?. Trying to run msiexec C:Program Files (x86)AdobeAcrobat 11 0AcrobatAcrobat exe /s ALL.. 0' Acrobat Acrobat filename PDF where the above is actually pdfread bat and filename.

But am getting feedback from an interactive sevices detection advising this won't work.
